

EUROPEAN FITTING

8

This fitting is a pioneer. It is made up of two profiles, one acting as a base and the other as a bracket , which has a stainless steel grub screw at the vertex to facilitate quick and easy installation. When the stainless steel grub screw is screwed in, it exerts a force that makes the upper part of the bracket rise, immediately fitting the two square pivots that emerge from the bracket into the aluminium profile, achieving a perfect fit.
