UGP-2 16-36

UGP-2 14-31

This T-Joint is used in traditional profiles types 40×18, 40×20..., this fitting has an enclosed screw hole, whose purpose is to stop the screw threads breaking.

European T-Joint is extremely robust because the whole perimeter is closed. The T-joint is attached to the profile by a grub screw. The main difference to the European Open T-Joint is that it must be positioned at the end of the profile.
