UGA-2

UGA

This T-Joint is used in traditional profiles types 40×18, 40×20..., this fitting has an enclosed screw hole, whose purpose is to stop the screw threads breaking.

Easy assembly, due to a grub screw, that can be positioned on the external side of the joint. This is a particular feature of this item. The lower part is open, which allows it to be fitted directly on the profile at any point.

An alternative would be the UGA-2 series, whose main difference is its strength due to the perimeter being closed and the screw hole enclosed.
