

LOCKING FITTING

T4 T41 T42 T43

Fitting classified in the family of the locking series; made up of two perfectly assembled flat wing profiles, providing great robustness in the profile where it is housed.

These series are manufactured for all chambers, different profile widths and different market distances. They are designed for narrow chambers, due to the fact that the pivots of these fittings are Ø 4 mm, which allows us to reduce the width of the fitting.
